EDUCATION

McMaster University

Bachelor of Engineering in Software Engineering (Co-op), GPA: 3.9/4.0

Hamilton, ON

Sep 2023 – Apr 2028 (Expected)

EXPERIENCE

Software Developer

Intact Financial Corporation

Sept 2025 – Present

Toronto, Canada

- Contributed to the development of Intact's Enterprise Content Management (ECM) service using **Java**, **Spring Boot**, and **REST APIs**, improving document storage and retrieval speed by **25%** for internal users.
- Collaborated with a 5-member cross-functional team to integrate ECM workflows with internal systems, leveraging Microservices architecture and ensuring **100%** compliance with document-handling standards
- Identified and resolved **15+** performance bottlenecks through code reviews, unit testing (**JUnit**), and **MongoDB** query optimization, resulting in a **30%** increase in scalability for handling high document volumes.

Full Stack Software Engineering Intern

Laurette Software

Apr 2025 – Aug 2025

Remote

- Developed a full-stack school directory web application using **React/TypeScript** frontend with **Java** backend & **SQL** database, delivering a production-ready educational platform.
- Implemented secure authentication system with **Auth0** integration, **JWT** validation, & role-based access controls, achieving **99.9%** uptime with secure user management.
- Built responsive **React** components with **Material-UI** & **Java REST APIs** for school data management, reducing update time by **60%**.

Software Developer, Exoskeleton Team

McMaster University

Dec 2024 – Present

Hamilton, ON

- Engineered real-time data pipeline for 10+ inertial sensors using **C++** & **ROS**, reducing latency by 60% & enabling adaptive gait control loops.
- Implemented extended Kalman filter for multi-sensor fusion, improving sensor accuracy by **35%** & stability during dynamic movements.
- Collaborated with cross-functional team to integrate AI-based **gait prediction models** in **Python**, achieving **92%** accuracy in stride phase detection.

PROJECTS

GryphHacks Volunteering Forum

May 2022

- Built full-stack web app with **React**, **Node.js**, & **Firebase** to connect volunteers & events, managing event listings.
- Integrated **Leaflet.js** for geospatial event discovery & implemented secure **RESTful APIs** in **C++** backend.
- Delivered MVP in 48 hours, placing **2nd** among 70+ international teams.

EcoHub Rewards Platform

Aug 2024

- Developed **React** frontend & **Firebase/Firestore** backend for eco-activity tracking, increasing user participation by **30%**.
- Implemented blockchain-inspired EcoCoin system on **Google Cloud Functions**, handling transactions securely.

CyberSecurity System

Nov 2024

- Designed a comprehensive system integrating **facial recognition**, a password manager, & file **encryption** capabilities using real-time video & symmetric key encryption.
- Leveraged technologies including **Python** (Flask, OpenCV, Cryptography) & **SQL** to ensure robust functionality with less than **2ms** response time.
- Achieved 2nd place among 30+ teams, recognized for technical innovation & practical execution.

TECHNICAL SKILLS

Languages: Python, C++, Java, JavaScript (ES6+), TypeScript, SQL, HTML5, CSS3

Frameworks/Tools: React, Node.js, Docker, Kubernetes, Firebase, Azure, ROS, Git, GitHub Actions, Jenkins, Postman, UML, Auth0, JWT

Concepts: Data Structures & Algorithms, OOP, RESTful APIs, Microservices, Agile/Scrum, CI/CD
